

TAYLOR ROSE

SNACK FOOD FACILITY

Taylor Rose were commissioned by Great Foods in Milton Keynes to convert an existing industrial unit into a new state of the art food production facility. The company produce a range of specialist snack foods. The whole design process was carried out by the Taylor Rose design team in close collaboration with Great Foods and was completed to their entire satisfaction.

The existing building was stripped out and a full range of temperature-controlled preparation and production rooms were created. Several fridges and a large freezer were installed along with all the relevant food production and handling equipment.

Taylor Rose also handled the relocation of existing production equipment from Great Foods previous factory and carried out the commissioning programme.

The works were completed on programme and within budget ready for handover in December 2012.

Taylor Rose's multi-disciplined approach was a crucial factor in the successful outcome of the project. As was our many years of creating food production facilities in many different sectors within the food industry.

Another successful project for the Taylor Rose team resulting in a production facility that is now operating at full capacity producing a wide range of vegetarian, gluten-free and specialist foods for the UK Retail market.
